

How to Download and Access the BLDAP Python Course Materials (Mac)

All course materials are distributed through **Google Classroom** . Follow the steps below on a **Mac** to download, organize, and upload the Python course materials to your Google Drive.

One Time Only:

1. On your **Desktop**, create a new folder named **BLDAP**
 - Right-click (or Control-click) on the Desktop
 - Select **New Folder**
 - Name it **BLDAP**

Download the Course Folder

2. Open **Google Classroom** in your browser and navigate to the Python course materials.
3. Locate the shared folder (e.g., `00_intro_to_python`).
4. **Right-click (or Control-click)** on the folder name and select **Download**.
Important: Download the **entire folder**, not individual files or notebooks.

Unzip the Folder on macOS

5. The folder will download as a **.zip file**, usually to your **Downloads** folder.
6. Open **Finder** → **Downloads**.
7. **Double-click the .zip file** to unzip it (macOS will automatically extract it).
8. Drag the extracted folder into the **BLDAP** folder on your Desktop.
9. Once confirmed, you may **delete the .zip file** to avoid confusion.

Fix “Folder Inside a Folder” (If Needed)

10. Open the extracted course folder (e.g., `00_intro_to_python`).
11. If you see another folder with the **same name inside it**, do the following:
 - Open the inner folder
 - Select the `tests` folder and the `.ipynb` notebook file
 - Press **Command** (⌘) + **A** to select everything
 - Drag those items into the **top-level course folder**
12. Delete the now-empty inner folder.

Upload to Google Drive

13. Open **Google Drive (My Drive)** in your browser.
14. Drag the course folder (e.g., `00_intro_to_python`) from the **BLDAP** folder on your Desktop into **My Drive**.
15. Wait for the upload to finish.

Open the Notebook

17. In Google Drive, open the uploaded folder.
18. Double-click the `.ipynb` **Jupyter notebook** file to open Google Colab.
19. Follow the instructions provided in the notebook and by your instructors.
